

Living Lab Workshops

A Healthier Wales

Context and purpose

From July 2020 Highlight Report

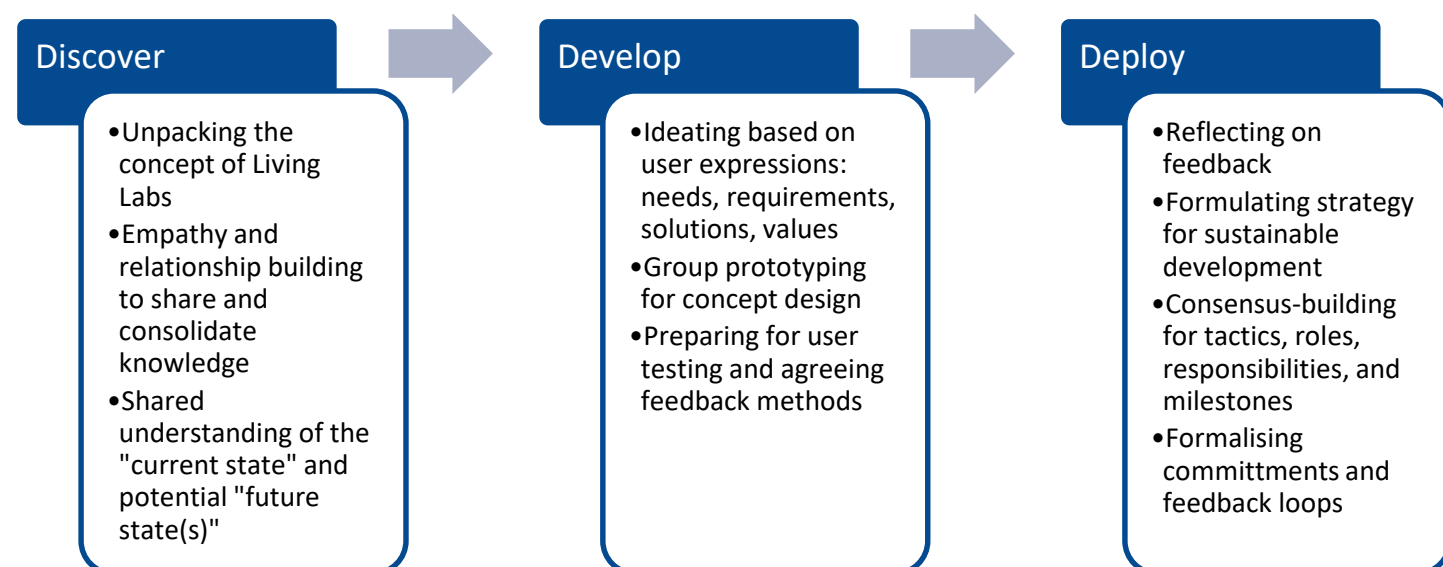

Gather partners to examine the living lab concept and develop a strategy for research, innovation, and improvement, to build on and coordinate with the BCUHB research and innovation strategy.

From ENoLL

Living labs are defined as user-centred, open innovation ecosystems based on a systematic user co-creation approach integrating research and innovation processes in real life communities and settings.

In this workshop series, participants will be immersed in living lab and design thinking methodologies to explore scope, potential, and application of this concept for *A Healthier Wales*. In this experiential learning approach, the multidisciplinary group of stakeholders will develop shared understanding, vision, and strategy for implementing integrated health and care innovation via the Research, Innovation, and Improvement Hub.

Workshop engagement sequence

Coaching Academy principles

Cultivating an innovators mindset

Reflective practice that informs courageous action builds capacity for transformative, systemic change.

Utilising design thinking principles

User-centred processes help us to challenge assumptions, redefine problems, and identify creative solutions.

Developing a coaching culture

Collaborative coaching empowers individuals and teams to implement sustainable community culture change.
